CHAPTER-IV

SCOPE OF WORK

Objective and Benefits:

Post-pandemic, there have been dedicated efforts by Government (central and states), social sector organizations, technology companies and corporates/PSUs to drive digital education in schools. Importance of Technology adoption and use in schools has been strongly emphasized in National Education Policy as well as state education policy. Solutions such as ICT Labs, VSAT-based learning, AV based smart class are few examples of technology interventions aimed towards usage of technology in schools. However, these solutions are aimed towards only specific goals and lack the robustness required for systematic upgradation of schools. For systematic upgradation of government schools, they required to be equipped with technology designed specifically for accelerating learning outcomes through school's digital infrastructure improvement, teacher capacity building and upskilling and a robust technology platform facilitating all needs including learning (in-class / at-home / teacher-led / self-paced) as well as administration. Furthermore, such solution should have easily adaptable and secure educational technology tools that empower teachers and students to be 21st Century Educators and Learners.

The proposed Digital Learning Platform with Smart Classroom for Schools is designed to be aligned with the guidelines in NEP 2020. The program aims to deliver high-quality education to all learners in an equitable manner and support the education ecosystem to prepare the future workforce and maximize the economic boost attainable through the highest demographic dividend expected by India during 2030s.

The main objectives of the program are:

- Enabling Government Schools with Essential Digital infrastructure such as Smart Classroom for enriching the Teaching-Learning Process.
- Making Delivery of Education simple and highly effective through a blended learning platform that connects all Teachers, Students, and Administration in Government Schools.
- Transforming education for most marginalized students in under-developed districts across the country (preferably aspirational districts) through meaningful technology interventions.

Project Overview:

21st Century is the era of digital transformation. We can see this transformation taking place in all industries across the globe and in all walks of life. Technology usage across various industries, job-roles is expected to advance exponentially with rapid digitization of processes and systems across organizations, emergence of disruptive technologies.

This raises the need for a holistic school digitization solution that has been designed to deeply integrate technology, both hardware and software, across the entire learning journey that happens with an Indian school classroom for both curriculum and co-curricular learning.
